fast

advantages of the kasu vacumet vdi 101

- * significant cost savings through reduction of garbage volume in total, up to 70%**
- * made same classification of former hazardous waste as municipal waste**
- * no bacteria, spores, germs, etc. and bad odour in sensitive industries and hospital environments**
- * usage for all kind of consumption goods being used in the medical or health care industries**
- * hygienic conditions for patients, visitors and involved staff**
- * secured handling of decontaminated garbage**
- * mobile solution, low maintenance**

all kind of consumables used in the health care industry such as injections, filters , oxygenerators , blood bags and all medical related products and safety boxes can be decontaminated in the same procedure as used diapers, gloves, dressing materials and other medical commodities. The result remains the same: decontaminated municipal waste – for the benefit of a safer environment in hospitals, safer working conditions in the health care industry and easy and cost saving waste disposal for all kind of users
